The Global Food Security Act | Feed the Future | U.S ...

If bioenergy competes with food production by using food or energy crops or dedicated land, it widens the food, land and GHG mitigation gaps. Biomass is also an inefficient energy source: Using all the harvested biomass on Earth in the year 2000—including crops, crop residues, grass eaten by livestock and wood—would only provide about 20 percent of global energy needs in 2050.
