There are some "harley" vibrations, but nothing like the dreaded dyna vibes. Before you shave, look at the curved rubber at the top of the mount. It is most likely rubbing on the top metal frame. This is transferring vibrations from motor to frame. Look at the pictures I posted in this thread. I went a "little" overboard, but some others have as well.

Vibration problem fixed! - Harley Riders USA Forums

The Dyna series has rubber engine mounts. They do a very good job of dampening engine vibration once the engine gets up in it's rpm range. When the engine is idling, the vibrations can be felt then. When accelerating, you can feel some vibration but it should be bad. Check your engine mounts and your primary chain adjustment.
