When interfacing an MTR2000 station to ANY external repeater, D-STAR, DMR, or DVM controller, make sure you've set the station configuration (Repeater/Base) to BASE so the station looks like a fully independent receiver and transmitter. This removes the internal repeater controller from the audio and PTT paths.

To: Repeater-Builder From: Eric Lemmon WB6FLY The MTR2000 does not use the traditional Motorola numbering scheme (like C73RCB3106BT) to indicate the band and power level. You have to decode a bunch of cryptic Field Replaceable Unit ("FRU") numbers in order to identify exactly what you really have, and these labels are not always visible!

**MTR2000 Field Replaceable Modules - Repeater Builder™**  
MTR3000 is a MOTOTRBO™ integrated voice and data repeater designed to meet the requirements of small municipalities, utility companies and professional organizations. The MTR3000 operates in all MOTOTRBO system configurations, delivering increased capacity, spectral efficiency, integrated data applications, and enhanced voice communications.
