Electronic fuel injection has become more and more common on smaller engines, and that's probably a good thing. Rather than using a carburetor, which mixes fuel and air through a system of valves, a venturi tube, and suction, EFI injects fuel directly into either the engine manifold or the cylinder. EFI has become the automotive industry standard over the last 30 years, and now, even turf management manufactures have begun to see the benefits of using EFI for small engines as well.
